

Organise File Readme

[Files Path] → Files Path setting is to define the Path location of file you need to re-organise. All file in the path will be organise with date of create. All file with same date of create will be store into same folder which will be create in the “Files Path” location. Just add line to include more path to organise if there are. But remember you need to change the path label from “Folder01, Folder02 Folder10” to allow the software work.

Example:

Folder01 = "D:\SPL Data\output\LimeLight woofer"

Folder02 = "D:\SPL Data\output\LimelightTwr"

[Files Extension] → Files Extension is related to the “Files Path” setting. Please set the extension of file that you need to organise for each path you stated at path label at [Files Path] location.

Example:

Ext01 = ".txt"

Ext02 = ".xml"
